

# Task One

1. Equation:  $10 + 20 = \$30.00$

So the reason of this equation is

- I.  $x + y$  equals 30
- II. `:C` turns 30 into a currency string (like `$30.00`) based on your computer's region

2. **Auto currency formatting** "`{var: c}`" Automatically adds the correct symbol (\$, €, etc.).
- 3.

```
1  int number = 1234567;
2  Console.WriteLine($"Formatted number: {number:N}");
3  // out
4  //Formatted number: 1,234,567.00
5
```
